Growth & development in recent years, in context of computing & IT, have shifted the focus from classical high performance models to scale out models and resilient models like cloud computing, leveraging commodity hardware. Accordingly, even software innovations like map reduce which offer a common man approach to building scalable software applications and algorithms thereof. In each generation, the infrastructure, the way we interact with these computers, and how we use these, have been shifting. The arrival of web changed the model of building applications by enabling everyone to become a content producer. Over the next few years, it is expected to see different trends which will include location awareness, context awareness. Augmented Reality would be just the tip of the iceberg.
