## **File Organization**

A file organization is a technique for physically arranging the records of a file on secondary storage devices. When choosing the file organization, we should consider the following factors:

- ✓ *Speed of data retrieval*
- ✓ *Speed of processing data*
- ✓ *Speed of update operations*
- ✓ *Storage space usage efficiency*
- ✓ *Failure and data loss protection*
- ✓ *Reorganization needs(frequency)*
- ✓ *Scalability (capability to grow, as more records are added to the file)*
- ✓ *Security*

# Sequential File Organization

In a Sequential File Organization the records in the file are stored in a sequence according to the Primary key value. To locate a particular record, a program must scan the file from the beginning until the desired record is located.

*In an Indexed File Organization, the records are stored either sequentially or non-sequentially and an index is created that allows the applications to locate the individual records using the index.*

*In the Indexed file organization, if the records are stored sequentially based on the primary key value then the file organization is called an indexed sequential organization.*

# Basic Concepts

- Indexing mechanisms used to speed up access to desired data.
  - E.g., author catalog in library
- **Search Key** - attribute to set of attributes used to look up records in a file.
- An **index file** consists of records (called **index entries**) of the form

search-key	pointer
------------	---------

- Index files are typically much smaller than the original file
- Two basic kinds of indices:
  - **Ordered indices:** search keys are stored in sorted order
  - **Hash indices:** search keys are distributed uniformly across “buckets” using a “hash function”.

# Index Evaluation Metrics

- Access types supported efficiently. E.g.,
  - records with a specified value in the attribute
  - or records with an attribute value falling in a specified range of values
- Access time
- Insertion time
- Deletion time
- Space overhead

# Types of Indexing

**\* Single –Level Indexing and \*Multi- Level Indexing**

**1. Primary index**

**2. Clustered Index**

**3. Secondary index**

# Types of Indexing contd...

- In an **ordered index**, index entries are *stored, sorted* on the search key value. E.g., author catalog in library.
- **Primary index**: in a sequentially ordered file, the index whose search key specifies the sequential order of the file.
  - Also called **clustering index**
  - The search key of a primary index is usually but not necessarily the primary key.
- **Secondary index**: an index whose search key specifies an order different from the sequential order of the file. Also called non-clustering index.
- **Index-sequential file**: ordered sequential file with a primary index.

# Dense Index Files

- Dense index — Index record appears for every search-key value in the file.

Brighton		→	A-217	Brighton	750	↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓
Downtown		→	A-101	Downtown	500	
Mianus		→	A-110	Downtown	600	
Perryridge		→	A-215	Mianus	700	
Redwood		→	A-102	Perryridge	400	
Round Hill		→	A-201	Perryridge	900	
			A-218	Perryridge	700	
			A-222	Redwood	700	
			A-305	Round Hill	350	

# Sparse Index Files

- **Sparse Index:** contains index records for only some search-key values.
  - Applicable when records are sequentially ordered on search-key
- To locate a record with search-key value  $K$  we:
  - Find index record with largest search-key value  $< K$
  - Search file sequentially starting at the record to which the index record points

Brighton		A-217	Brighton	750	
Mianus		A-101	Downtown	500	
Redwood		A-110	Downtown	600	
		A-215	Mianus	700	
		A-102	Perryridge	400	
		A-201	Perryridge	900	
		A-218	Perryridge	700	
		A-222	Redwood	700	
		A-305	Round Hill	350	

# Sparse Index Files (Cont.)

- **Compared to dense indices:**
  - Less space and less maintenance overhead for insertions and deletions.
  - Generally slower than dense index for locating records.
- **Good tradeoff:** sparse index with an index entry for every block in file, corresponding to least search-key value in the block.
